General Traffic Equipment

General Traffic Equipment presents its line of hollow cast aluminum signal brackets of the tri-stud type. These brackets are very popular in the South, being lightweight and durable and easily installed. Solid, lower spacing brackets are available to compliment the upper brackets and provide a maintenance free installation. Now your Traffic Dept. can quickly assemble a two, three, or four-way signal while at the same time eliminating the need to stock elbows, crosses, tees, pipe sections and center hubs. The upper, as well as the lower bracket, are cast from 356-T6 aluminum alloy.
