- *Solar Module Converts Sunlight to DC- Electricity*
- *Minimal Maintenance During Operating Lifetime*
- *Individual LED Elements Have Rated Life of 100,000 Hours*
- *Programmable Timer*
- *Unique Warranty*

General Traffic Equipment Corp's Solar-Powered Beacon Flashers are a simple, reliable, cost-effective and energy-efficient turnkey solution for your Caution Beacon requirements. The systems are available with high output LED lamps, single or double beacon heads, locking control and battery boxes, and a programmable timer to ensure accurate time controls. Routine maintenance is minimal, keeping shade from nearby trees and/or buildings from impacting the solar power output, and inspecting the connections in the control panel and timing device to be sure they are clean and tight. The sealed, lead-acid system battery is completely maintenance free, with a shelf-life of five to seven years depending on environmental conditions.
